ASSESSMENT OF PAY-PER-VIEW USE: CONSUMER PERCEPTION AND CHOICE

Author: DO, JOONHO

Degree: PH.D.

Year: 1996

Corporate Source/Institution: MICHIGAN STATE UNIVERSITY (0128)

Source: VOLUME 57/05-A OF DISSERTATION ABSTRACTS INTERNATIONAL.

PAGE 1895. 157 PAGES

Rapid technological development in the video entertainment industry has increased the number of distribution channels. Although it is a new method of delivery, pay-per-view has great potential for changing media consumption patterns of audiences with the development of such technologies as video-on-demand. This dissertation investigates how consumers perceive pay-per-view as a video distribution channel and use it to satisfy video entertainment needs. There are three main research questions in the study:
(1) How does the audience perceive pay-per-view as a distribution channel?
(2) What is the relationship between perception and use of pay-per-view?
(3) What are the main factors in purchasing a pay-per-view program? Based on expectancy-value theory and program choice theory, this study examines such theoretical dimensions as expectancy-value attitudes, viewer availability, viewer awareness, and channel repertoire.

This study combined in-depth interview and telephone survey to answer the research questions. In-depth interviews were conducted by using *USENET* on the Internet and electronic mail. Interviewees were recruited from cable TV and video entertainment related interest groups on *USENET*. Forty-eight people across the nation participated in the interview by answering open-ended questions via electronic mail. Based on the interview results, the telephone survey questionnaire was developed. The telephone survey was conducted for cable TV subscribers in the East Lansing area, which produced 419 completed subjects.

The investigation showed that consumers perceive pay-per-view as a convenient and spontaneous medium for entertainment. While they appreciate the convenience of pay-per-view, consumers pointed to the high *price*, lack of variety in titles, no control over programs and late window for movies as negative attributes. Expectancy-value attitude was found to be a good predictor of using pay-per-view. The study also found that viewer awareness and channel repertoire are related to the use of pay-per-view while viewer availability becomes less important in predicting use. This study also provides evidence that pay-per-*view* would gain more *users* with improvements in scheduling, consumer control of programs, and the ordering process.

Language: English Document Type: Journal Paper (JP)
Treatment: General, Review (G)

Abstract: This article investigates the Internet research methods of members of the Wellington Infertility Society. The study found that over half of the group, or 55.6% used the Internet in different ways. The most common location for Internet use was the home, followed by workplace. Half of those using the Internet had used it for health research (35 of 70), although half of those who were able to use the Internet for infertility research chose not to do so. Search engines and directories were common methods of identifying material-58.7% used these features. Web sites were popular, although resources such as *Usenet* and email were also mentioned. Keywords used were generally appropriate, although the number used was comparatively small. *User* *comments* indicated mixed understanding of issues concerning the accuracy and authority of Internet resources. Recommendations for training programmes included developing a range of search strategies, incorporating a variety of keywords, and using different search engines and directories. The article concludes that development of critical evaluation of Internet resources should be an important element of Internet training. (11 Refs)

Treatment: Practical (P)

Abstract: Keeping up with new resources on the Internet is not easy since there can be hundreds of them: *discussion* *lists*, *newsgroups*, gopher and *Web* services, electronic journals, added or amended each day. The popular UK Internet magazines like .net and Internet, and PC magazines such as Personal Computer World make some attempt to list new services together with comments, but can only be selective in what they include. For comprehensiveness and *timeliness* it is necessary to use the Internet itself, where there are many services announcing new resources. Indeed there are so many that using them all could take up more time than most people would be prepared to give. Accordingly we have listed the services we think are the most helpful, together with some *comments* to help *users* decide which are likely to be most relevant to them. (0 Refs)

Language: English Document Type: Journal Paper (JP)

Treatment: Practical (P)

Abstract: The decision to examine a message at a particular point in time should be made rationally and economically if the message recipient is to operate efficiently. *Electronic* message distribution systems, *electronic* *bulletin* *board* systems, and telephone systems capable of leaving digitized voice messages can contribute to 'information overload', defined as the economic loss associated with the examination of a number of non- or less-relevant messages. The model proves a formal method for minimizing expected information overload. The proposed adaptive model predicts the usefulness of a message based on the available message features and may be useful to rank messages by expected importance or economic worth. The assumptions of binary and two Poisson independent probabilistic distributions of message feature frequencies are examined, and methods of incorporating these distributions into the ranking model are examined. Ways to incorporate *user* supplied relevance *feedback* are suggested. Analytic performance measures are proposed to predict system *quality*. Other message handling models, including rule based expert systems, are seen as special cases of the model. The performance is given for a set of UNIX shell programs which rank *USENET* messages. Problems with the use of this formal model are examined, and areas for future research are suggested. (42 Refs)

**JOURNALISM ON THE ELECTRONIC FRONTIER: A Q METHODOLOGICAL COORIENTATION
ANALYSIS OF ATTITUDES AND PERCEPTIONS ABOUT INTERNET REPORTING**

Author: REAVY, MATTHEW MICHAEL

Degree: PH.D.

Year: 1995

Corporate Source/Institution: UNIVERSITY OF MISSOURI - COLUMBIA (0133)

Supervisor: KEITH SANDERS

Source: VOLUME 58/01-A OF DISSERTATION ABSTRACTS INTERNATIONAL.

PAGE 12. 214 PAGES

This study examines attitudes of journalists and Internet users regarding the practice of journalism on and about the Internet. Special emphasis is placed upon an examination of opinions held by participants in a *Usenet* *newsgroup* devoted to the discussion of media covering the Internet.

The Internet holds interest for journalism scholars in four general areas: (1) as a news subject; (2) as a news source or a way of contacting sources; (3) as a forum for discussing journalism; and (4) as a news medium. This study draws upon two theoretical fields, deindividuation (small group) and availability/cultivation theory (mass), to examine the communications environment on the Internet and assess its role in the formation of attitude and *opinion*.

Internet *users* and journalists in this study show a high degree of agreement about journalism and the Internet; however, their characterizations of one another illustrate that they recognize only those areas about which they disagree. They fail to correctly perceive their consensus of opinion on several fronts.

Although no anti-journalism pattern manifests itself in an absolute sense, Internet users who participate in conversations on the *Usenet* *newsgroup* alt.internet.media-coverage demonstrate more negative attitudes toward journalism than others. They uniformly believe that the media have done a poor job of covering the Internet to date. The pattern formed by their attitudes exhibits the effects of polarization, a condition normally associated with salient, cohesive groups.

This research suggests that journalists and media scholars need to devote more attention to the social-psychological aspects of the online environment. More than simply a medium of communication, the Internet provides a means for computer-mediated interaction that could dramatically alter the practice of journalism online.

Treatment: Practical (P)

Abstract: Analyses instant knowledge sharing among customer support agents. These agents effectively exchange useful information through *electronic* mail and *electronic* *bulletin* *board* services. Empirical analyses have taught us that the direct use of e-mail is the key to instant knowledge sharing in busy organizations like high-tech-product customer support organizations. The authors have developed "Interaction Viewer", an instant case-based reasoning (CBR) tool that runs with commercial e-mail management systems such as Microsoft Outlook Express. The tool analyses the relations among e-mail messages by tracing the body texts and extracting quotation descriptions inserted in the bodies. A question mail message and its corresponding answer mail message are integrated into a case. Because all mail messages are automatically modified into cases and the mail folders are transformed into a case base, instant knowledge sharing is easily achieved. Although the case retrieval performance is not as good as more integrated CBR systems, the easy-to-adopt feature of the approach should be welcomed by busy organizations. It should also be welcomed by marketing divisions to analyse various *customers*' *opinions*. (8 Refs)

Abstract: A new niche industry has developed to meet the corporate need for efficiently organized presentations of the volumes of online discussion content. These niche players, Discussion Miners are making good money selling consumer insight aggregation from community sources like message boards, chat rooms, rating and review systems, and *Usenet* *newsgroups*. Corporate clients pay big bucks to know what consumers are saying in the real world. Cash-strapped community sites, whose user content is being mined, are often unaware that *user* *comments* are being collected, repackaged, and sold, and may be missing out on a choice revenue opportunity. Plus, there's that tricky little devil called copyright.

Treatment: Practical (P)

Abstract: The article discusses the results of a survey designed to assess the current state of electronic access to government information from both the specialist and the user viewpoint. The first survey, designed to determine the government documents staffs' level of commitment to and opinions of electronic access to government information, was distributed in electronic format to subscribers of GOVDOC-L, a *listserv* for specialists dealing with government documents. The second survey, designed to provide insight into the *user*'s point of *view*, was conducted at the University of Illinois Documents Library. The article synthesizes earlier studies and articles on the topic to show that while the consensus is that electronic access represents a positive, beneficial move toward providing access to government information to a wider audience, there is also an acknowledgment that there are many inherent problems that have not been addressed adequately. Abstract: We have developed a social meeting system called CommunityBoard which visually displays the discussion structure. Discussions on networks, e.g., by a mailing list, *Usenet* *newsgroup* , or online forum, are

becoming more and more popular. However, many people have difficulty following and participating in discussions on networks, and one of the reasons is due to a failure to grasp the context of discussions. Previous tools have been insufficient in helping to avoid this failure. In order to solve this problem, we have developed CommunityBoard. Users can avoid confusion and achieve informative discussion. This system provides one integrated view of discussions from three aspects: the speakers, topics and time. The integrated *view* enables *users* to easily obtain various information about these aspects at one glance and this leads to lively and productive discussions. An example illustrates the efficiency of CommunityBoard. (11 Refs)

Treatment: Applications (A); General, Review (G)

Abstract: An iterative design approach, taking advantage of today's inter- and intranetworked society by offering users fast and efficient means of providing early feedback using "mail-order help" and an internal *newsgroup*, is described. The time and money spent in providing these tools for early feedback turned out to be a very good investment. Some positive and unforeseen effects were found, such as the willingness of users to provide not only questions and comments, but even answers to other users (and inquisitive developers). With the proliferation of the World-Wide Web, *user* *feedback* by electronic means will become an established practise. (1 Refs)

Abstract: The MIT Libraries, in collaboration with the MIT Japan Program, are conducting the Japanese Science and Technology Information (JSTI) project, currently focusing on the field of materials science and engineering. The objectives of this project are (1) to increase the flow of science and technology information from Japanese to US researchers and managers by creating a World Wide Web resource, and (2) to enhance cooperation among researchers in the USA and Japan by creating an interactive *listserv*. This paper presents a brief background and general overview of the project, analyzes the statistics to determine numbers, types and locations of *users*, and *comments* on some issues in accessing Japanese science and technology information. Conference Date: 26-28 Feb. 1997 Conference Location: Kiel, Germany

Language: English Document Type: Conference Paper (PA)

Treatment: Practical (P)

Abstract: The rapid growth of public information systems, e.g. *UseNet* or the World Wide Web, increases the need for tools filtering the information. A significant problem in many information filtering agents is that the user is forced to define his interests explicitly. This task is unacceptable for most users. Approaches which automatically generate interest profiles suffer from the disadvantage that the profiles are very complex. Therefore, a review is not practicable for the user. A new information filtering agent, NewsSIEVE, with automatically generated simple profiles solves this problem by complex evolutionary optimization procedures processing the *user*'s *feedback*. Due to the size and structure of the interest profiles generated by NewsSIEVE, a review is much easier than it would be for most other learning filtering agents. Using simple profiles achieves a significant performance. A small amount of classified data is sufficient to double the percentage of interesting messages. (12 Refs)

Treatment: Applications (A)

Abstract: Multimedia office system "MUSCAT" has been developed to create paperless offices and to make communications more efficient and effective, utilizing the network technology and multimedia processing technology. MUSCAT is equipped with multimedia *electronic* mail/*bulletin* *board* systems based on the Internet standard protocol, an electronic address book with voice-looking-up function using speech recognition technology, and an index video news system (IVNS) for content based browsing of video. Use of the optional voice modem makes it a computer telephony system, such as a speaker phone and auto-dialer. MUSCAT has already been used in our office. It is planned to extend the functions and to create new multimedia applications based on *users*' *feedback* and *comments*. (13 Refs)

Conference Date: 10-12 Nov. 1995 Conference Location: Cambridge, MA, USA

Language: English Document Type: Conference Paper (PA)

Treatment: Theoretical (T)

Abstract: We have begun a project to build a cooperative multi-agent information gathering system in the initial domain of computer product queries. Top level user queries drive the creation of partially elaborated information gathering plans, resulting in the employment of multiple cooperative agents for the purpose of achieving goals and subgoals within those plans. The agent will use existing information resources available on the Internet such as *newsgroups*, archives, magazine databases, and corporate WWW sites. Such a system takes a distributed problem solving approach where the agents are autonomous, socially situated, and can react to a dynamically changing environment. For example, agents may explicitly coordinate their actions when it is desirable or necessary. Agents may share information with one another that affects what plans they pursue,

what order they execute actions, and when they execute them. Another feature is that the agents are time-aware and are free to develop and follow different information gathering plans that depend on the amount of time they have to produce an answer. Eventually, some agents will use technologies like natural language form-filling programs and the INQUERY indexing scheme to make decisions about how to focus their search without constantly requiring detailed *user* *feedback*. We have developed an information filter for use with *USENET* News which routes through to a user those articles which are deemed to be of interest to him/her based on progressive monitoring of that user's previously observed preferences. Over time, the filter adapts so as to accommodate a user's changing interest. This is accomplished by constructing a user profile from previous messages known to be relevant to the user and modifying the structure of this profile as a result of relevance *feedback* provided by the *user*

Good karma: Plastic.com's community-driven content model -- It's a pop culture news site that's a form of Web log

Pack, Thomas

E-Content , June 1, 2001 , v24 n4 p54-55, 2 Page(s)

ISSN: 1525-2531

Company Name: Automatic Media

URL: <http://www.plastic.com>

Product Name: Plastic.com

Discusses the Web site Plastic.com, a place to suggest and discuss online the most worthwhile news, opinions, rumors, humor, and anecdotes. Adds that the site's *users* not only can *comment* on information anywhere on the site, but also filter and rate comments from others. Points out that users can create and customize their own home pages to display whatever combination they want of article summaries, sidebars, feature headlines, and links, and they can suggest articles from other sites that should be featured on Plastic.com. Says that Plastic.com was the first new Web site developed by Automatic Media, founded in July 2000 through the merger of several well-known alternative sites, including Webby-award nominee FEED, Suck.com, and Alt-Culture.com. Includes a screen display. (EPE)

Netscape takes its act on the road -- Despite lukewarm support for Web technologies, Communicator 4.5 may become the UI of choice for mobile and roaming users

Shimmin, Bradley F

LAN Times , August 3, 1998 , v15 n16 p37, 1 Page(s)

ISSN: 1040-5917

Company Name: Netscape Communications

Karen Lehman EIC 3600 30-Oct-03

Product Name: Communicator 4.5

Presents a favorable beta preview of Communicator 4.5 (\$NA), a Web tool from Netscape Communications Corp. Runs on IBM PC compatibles with Windows 95. Explains that Communicator comes with the Netscape Navigator Web browser, an e-mail client, *newsgroup* reader, HTML editor, instant messenger, and calendar program. Reports that Communicator's e-mail client comes with a three-pane user interface which lets *users* *view* folders, headers, and messages simultaneously. Says that the impressive Roaming Access feature suite, which lets mobile workers download data and access configuration information from any client workstation, enables Communicator to synchronize e-mail messages, *newsgroup* postings, and directory listings without any server software. Also praises Communicator's capability of maintaining state on the server; however, complains that it lacks support for current and emerging Web technologies. Includes one screen display and a product summary.

HotBot

Perenson, Melissa

PC Magazine , December 2, 1997 , v16 n21 p252, 255, 2 Page(s)

ISSN: 0888-8507

URL: <http://www.hotbot.com>

Product Name: HotBot

Presents a mixed review of HotBot, a Web *Usenet* search service. The service indexes around 20,000 *newsgroups*, but retains messages for only three weeks. In testing, it routinely returned fewer articles than either Deja News or Reference.COM. It supports the use of Boolean and exactPhrase searches and users can specify a date and *newsgroup*. It ranks its search results and allows *users* to *view* articles in a separate window. However, it does not display the author or date of post in its results and it does not allow *users* to *view* threads or move from one article to another. It also does not allow posting messages. Concludes that it ``simply lacks the scope and features of Deja News and Reference.COM.'' (djd)

Tap the secrets of the Net

Finnie, Scot

PC/Computing , January 1, 1997 , v10 n1 p110, 1 Page(s)

ISSN: 0899-1847

Company Name: MicroPlanet

Product Name: Gravity

Presents a very favorable review (five stars) of Gravity 1.01 (\$44.95), an Internet newsreader from MicroPlanet (919). The program decodes downloads automatically and allows users to read posts offline. It can eliminate multiple versions of the same post in different *newsgroups* and can allow the *user* to *view* and click on live hypertext links in a *newsgroup* message. It offers a Rules Engine which is powerful and flexible and can be used to, among other things, search for messages containing specific words, block messages from specified authors, or decode images and save them to the hard drive. Although competing newsreaders are

free, this program makes the most of what Internet *newsgroups* have to offer. Says that ``neither Forte Agent nor the readers in Netscape Navigator and Microsoft Internet Explorer can match Gravity.'' Includes one screen display. (djd)

Web browsing made better

Loshin, Peter

PC World , January 1, 1996 , v14 n1 p88, 1 Page(s)

ISSN: 0737-8939

Company Name: Netscape Communications

Product Name: Netscape Navigator; Netscape SmartMarks

Presents a favorable review of Netscape Navigator 2.0 (\$49) and a mixed review of NetScape SmartMarks 1.0 (\$24.95), two Internet tools from Netscape Communications Corp. (415). Navigator now includes integrated e-mail and *Usenet* clients, support for Multipurpose Internet Mail Extension Files, and Java (a programming language for Internet applets). Its e-mail client supports MIME attachments and will support Secure MIME for encrypting a digitally signing messages and Secure Courier which provides secure credit card transactions over the Net. The program supports frames which let a *user* *view* and interact with multiple Web windows on the same browser screen as well as plug-in viewers for viewing inline graphics. SmartMarks is an add-in bookmark manager with 300 bookmarks organized in topical folders. It can also monitor Web sites for content changes. Says it ``scores well for concept, but only average for execution.'' Includes two screen displays. (djd)

On the lighter side -- A look at the rec.arts.movies and alt.romance *Usenet* *newsgroups*

Robbins, Gary

Online Access , December 1, 1994 , v9 n8 p23-24, 2 Page(s)

ISSN: 0898-2015

Examines rec.arts.movies and alt.romance, two Internet *Usenet* newsgroups. Says that the rec.arts.movies newsgroup receives over 2,000 messages weekly. Adds that most of the messages that are collected in this site are appended to ongoing discussions. Invites readers to try the site's Put-Down by Critics section, which allows Internet *users* to air their *comments* about movies they have seen. Lists five subject headings found in the alt.romance site. Details the experience of a woman who solicited advice from alt.romance users. Includes a photo. (ACD)

Secrets from within *Usenet*

Savetz, Kevin

Internet World , November 1, 1994 , v5 n8 p31-32, 2 Page(s)

ISSN: 1064-3923

Presents tips for effective participation in *Usenet*. Says newsreaders act as a specialized utility to optimize a user's time with *newsgroups*. Explains that a newsreader is a powerful and flexible utility which can search for *newsgroups*, indicate the subject of each message within a *newsgroup*, and facilitate access to *newsgroup* postings; and that the Stanford Netnews Filtering Service searches all the *newsgroups* for articles that match the filter provided by a user, with the search strategy, frequency of delivery of articles, and the duration of the subscription capable of being refined through *user* *feedback*. Includes a chart. (dpm)

Internet blues -- Service is degrading. Boors are invading. She's tired of paying her dues. She's got the...

Lear-Newman, Elizabeth

Internet World , September 1, 1994 , v5 n6 p76-79, 3 Page(s)

ISSN: 1064-3923

Discusses the changes being caused by the proliferation of commercial users on the Internet and the protests being expressed by educational and research *users* who are *feeling* the crunch. Contends that with this influx of users, there has been a dramatic increase in incidents of abuse, including: junk e-mail, the generation of postal mailing lists from *newsgroup* postings, commercial advertisements, major online services offering *Usenet* access to thousands of inexperienced people who do not know the rules of the net and abuse net policy, and many others. Concludes that the result of this is that experienced Internet users are being forced to either get involved or leave the net which is so important to them. (CH)

Sifting through Comdex boxes reveals some real product, idea gems

Pournelle, Jerry

InfoWorld , Jun 29 1987 , v9 n26 p30, 1 Pages

ISSN: 0199-6649

A *USER*'S *VIEW* column discusses two of the products the author liked that he got as a result of his visit to Comdex in Atlanta. Describes the Zenith Z-181 (a laptop micro) and Word Perfect's Executive (a word processing package for use on portables). Reports that the Federal Communications Commission has decided to raise the fees about \$4.50 to \$5.40 an hour for those who use telephone access services such as CompuServe.

Executive insights: Virtual services go international: International services in the marketpace

Berthon, Pierre; Pitt, Leyland; Berthon, Jean Paul; Katsikeas, Constantine S

Journal of International Marketing v7n3 PP: 84-105 1999

JRNL CODE: INL

WORD COUNT: 8290

...TEXT: external, competitors', and internal customers (employees) (Berry and Parasuraman 1997).

Every day on the Internet, *customers* are *commenting* on physical products and services. *Newsgroups* and *listservs* provide forums for consumers throughout the world to make comments about a company's goods closer to customers and stay focused on their needs.

Service *Quality*. Whereas *quality* can be controlled relatively simply in the production process for goods, in the case of...

...services, this is more difficult and results in heterogeneity of service outcomes. To manage service *quality*, it must be measured, for if something cannot be measured, it cannot be controlled. In the past ten years, tremendous progress has been made in the measurement of service *quality*. An online version of SERVQUAL (Parasuraman, Zeithaml, and Berry 1988), written in JavaScript, captures customers' expectations and perceptions of service *quality* and e-mails these data to a market research company (www.negia.net/-mfocus). The...

... of Web-based questionnaires is reducing the length of the feedback loop so that service *quality* problems can be detected rapidly and corrected before a critical mass of customers is disaffected...

ABSTRACT

PROBLEM TO BE SOLVED: To view messages which are simultaneously transmitted from the outside while the *users* *view* a broadcast program or contents recorded in the video recording device such as video tape recorder.

SOLUTION: For compositing the picture of a commercial or the like at a specified channel by synthesizing the picture with only the video signal of the specified channel of a broadcast signal, a television *message* *board* is constituted in the following. In a video switch device, a fourth video signal inputted from a channel on a first broadcast signal received from an antenna or the like or from a video recording device is selected as a video signal corresponding to the specified channel and it is outputted to a computer. In the computer, the video signal is composited with the previously generated picture and it is outputted as the video signal. The video signal outputted from the computer is inputted and the video signal corresponding to the specified channel is modulated again. It is mixed with the broadcast signal of the other channel and it is outputted again as the broadcast signal.

ABSTRACT

PURPOSE: To attain the transmission of information between a user and a bulletin board requesting person by devising the system such that a user observing bulletin board information observes a user interface section provided to an *electronic* *bulletin* *board* system to input a required data, and transmitting the data to the board requested person via a network.

CONSTITUTION: When a board request person inputs a bulletin board 41 of a user interface section 40 or a work station connecting to a communication *network*, a *bulletin* *board* information processing section 30 analyzes a bulletin board information. Then the bulletin board information is stored in a memory 34 and displayed on a bulletin board information display section 42. Then each person observes the content of the bulletin board information for the confirmation and enters a reply or a *comment* from the *user* interface section 40 as required. The reply or comment is transmitted to a bulletin board information sender and when the limit of notifying period of board reaches, the replies or comments are transmitted to the bulletin board information request person altogether. Thus, the information between the user and request person is communicated.

KR 2002014887	A		1	G06F-017/60	

Abstract (Basic): KR 2002014887 A

NOVELTY - An agency service method for Internet delivery is provided to make the workers of small shop having no prepared Internet service deliver the ordered goods or service through the Internet.

DETAILED DESCRIPTION - A customer accesses a service-providing Internet server and selects the desired region and the kinds of food. The customer orders the desired food in listed shop through the Internet by using an ordering tool provided from the service company. The *customer* writes an *opinion* or an article through a reply type *bulletin* *board*. An *Internet* server manager informs the customer of the ordered state data and a restaurant of the ordered data if the customer orders some food by using an order monitoring tool. In case of a restaurant available for the Internet, the restaurant checks the ordered data through the Internet and delivers the ordered food by accessing the service-providing server. The restaurant receives the orders of Internet users without needing the knowledge about a PC or the Internet by a specific contract with the server manager.

JP 2002169830	A		23	G06F-017/30	

Abstract (Basic): JP 2002169830 A

NOVELTY - A storage stores the prescribed unit contents which are classified according to registered keywords. An *electronic* *bulletin* *board* system receives the *user* *comments* input with respect to delivered contents. The comment information is analyzed so as to choose the contents which are to be delivered.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are included for the following:

(1) Information provision method;

(2) Recorded medium storing information provision program.
USE - For providing information such as novel, series column, etc.,
through communication network e.g. Internet.
ADVANTAGE - By analyzing the *user* *comments*, the *user*
preference is met effectively.
DESCRIPTION OF DRAWING(S) - The figure shows the block diagram of
information provision system. (Drawing includes non-English language
text).

Patent Details:
Patent No Kind Lan Pg Main IPC Filing Notes
JP 2002049561 A 6 G06F-013/00

Abstract (Basic): JP 2002049561 A
NOVELTY - A message to be printed is divided into several words
using a Japanese dictionary (50). Each word is detected with respect to
a collection (30) of a modification objective team. A database
management system (DBMS) substitutes each word with more suitable
words, before printing.

USE - *Electronic*-bulletin*-board* system in *Internet*.
ADVANTAGE - Since the unsuitable words are replaced automatically,
the *electronic*-bulletin*-board* system can be operated, without
giving an unpleasant *feeling* to the *user*.

DESCRIPTION OF DRAWING(S) - The figure shows an outline component
of the *electronic*-bulletin*-board* system. (Drawing includes
non-English language text).

Patent Details:

Patent No	Kind	Lan Pg	Main IPC	Filing Notes
JP 2002024135	A		7 G06F-013/00	

Abstract (Basic): JP 2002024135 A

NOVELTY - ***Electronic* *bulletin* *board*** (5) issued from the community site (1) to internet linked terminals (3,4) ordinarily incorporates ***comments*/responses** from ***users*** at the terminals as appropriate. When comments from a particular terminal (3b) elicit objecting response from terminal (4b), the original comments now deemed inappropriate, are deleted from the bulletin board.

USE - Subject specific bulletin boards with multi-user access/interaction over internet have gained wider acceptance as information exchange/communication tools.

ADVANTAGE - Prevents vitiation of the interacting atmosphere and saves a lot of unpleasantness liable to be generated.

DESCRIPTION OF DRAWING(S) - The figure shows the block diagram of community site. (Drawing includes non-English language text).

WPI Acc No: 1999-399462/199934

Outer cladding frame structure for *electronic* blackboard, *bulletin* *board* - has corner frame molded such that its front and peripheral surfaces project from that of hollow head jamb, left and right side frames and sill made of resin

Patent Assignee: RICOH ELEMEX KK (RICW)

Number of Countries: 001 Number of Patents: 001

Patent Family:

Patent No	Kind	Date	Applicat No	Kind	Date	Week
JP 11157282	A	19990615	JP 97344418	A	19971128	199934 B

Priority Applications (No Type Date): JP 97344418 A 19971128

Patent Details:

Patent No	Kind	Lan Pg	Main IPC	Filing Notes
JP 11157282	A		6 B43L-001/04	

Abstract (Basic): JP 11157282 A

NOVELTY - The frame comprises a head jamb (3), right and left side

frames (4) and a corner frame (2). The corner frame is molded such that its front and peripheral surfaces project from that of hollow head jamb, right and left side frames and sill made of resin.

USE - For *electronic* blackboard, white board, *bulletin* *board*, *message* *board*.

ADVANTAGE - Even when gap and stage difference are produced in the junctions of the frame, the frame does not cause odd *feeling* for *user*. Assembly property is increased because of usage of resin sill, hollow head jamb and left-right side frames. DESCRIPTION OF DRAWING(S)
- The figure shows the exploded perspective view of outer cladding frame. (2) Corner frame; (3) Head jamb; (4) Right-left side frames.

HAVE OUTLET MALLS THEMSELVES BECOME COMPELLING BARGAINS? ALSO, BEHIND THE RECENT RETURN OF IOMEGA INSANITY

San Francisco Chronicle (SF) - THURSDAY, June 5, 1997
By: Herb Greenberg

Edition: FINAL Section: Business Page: B1
Word Count: 554

...earnings are going to be better than most analysts expect.

What about ongoing chatter regarding *quality* problems with the Jaz, which was supposed to be Iomega's second coming? The company recently recalled 75,000 Jaz disks, and *Internet* *bulletin* *boards* are filled with *comments* from disgruntled Jaz *users*.

But, hey, why bring up possible problems? This is Iomega, and as history has proven...
